

DioLite Digital Bi-Color LED 1x1 Panel w DMX

This 1'x1' LED studio light panel has taken the common size layout and has added bi-color LED's (AKA variable color temperature) and a fully digital readout to a very sturdy and well-built frame. The advantage to having a digital screen enables the operator to see the exact color temperature and brightness level (dimnable from 0-100%). When duplicating your previous shot, you can do so with precision.

The Bi-Color knob allows you to mix the color temperature meaning that it can be 3200k, 5600k, or anywhere in between the two. The LED's actually change color temperature electronically, without filters, resulting in extremely accurate colors temperatures.

The included battery plate now makes professional lighting fully portable, choose either Anton Bauer or V-Mount battery plates. With 50W and 1156 LED's, this light is extremely bright and powerful while also remaining light, slim, portable, flicker and heat free.

This unit is both dimmable and bi-color. It attaches to a standard 5/8" light stand with the included yoke and can be powered by either an included AC adapter or Anton Bauer Gold Mount or V-Mount Battery.

LCD read out for color temperature and brightness

Weight: 4 Pounds

CRI: 90+ No Green!

Dimensions: 1' x 1' x 2"

Power: 50W (650W Equiv.)

Color temperature: 3200K Tungsten~5600K Daylight and any anywhere in between

Lighting Output: 2100lux/1.5m

Beam Angel: 60° (Flood)

Dimmer: 0-100%

LED light life: 50,000 hours. 1 Year Warranty

Input power: Camcorder battery, DC14.8V

Adapter - 4pin standard socket
